

# Winner & About Me Page

Now that our games are finished, we need to create the page the user arrives at when they get to the end of the challenges. This page will not have any functionality, instead we will design it using CSS and add two links to the page: one to take the user back to the login screen, and the second to take the user to the 'about me' page which we will add at the same time as adding this page.

**To set up your Winner & About Me pages, follow these steps:**

1. Go to your 'project files' folder, and copy the winner.html and about-me.html files, paste them into our main project folder, where the rest of your html files are.
2. Next, copy the 'winner.css' and 'about-me.css' files from the css folder in 'project files' into the css folder in your project.
3. Double click the winner.html file in your project, and open the file in your browser.
4. Double click the about-me.html file in your project, and open the file in your browser.

These two files have very little in terms of functionality, and instead show you in different ways the things you can do with CSS.

## The Winner Page

Look through html and the css for the winner page, and you can see how this page has been built using css. There is very little content in our HTML, instead we are designing our cup in the CSS classes and applying them to our HTML elements as attributes.

There is nothing you need to do to this page, but I would suggest going through the css and the elements and playing around with it a little.

- See if you can change the background colour of the page, or the colour of the cup.
- See if you can change the text that is showing, or add more text
- See if you can change the links that appear on the page and link to different pages.

# About Me Page

The About Me page is a place where you can practice your CSS and HTML. I have designed a simple interface for you, and you can replace the pictures and content with your own images and text.

- Change each of the three images to different images
- Add your own details in each of the boxes.
- Try to add a new box or three new boxes below the existing ones.
- Play with the different HTML elements to update the page
- Play with different CSS elements to style the page how you want it (this page uses 'about-me.css' and not 'style.css'.
- See how you can personalise the screen using the skills you have learnt

Once you have completed these two pages, you have finished the beginners bootcamp! Congratulations, and well done - I know it was tough, but I bet you know so much more now that you have finished!

**Well done!!!**
