Beginner's Bootcamp

Welcome to the Beginners coding bootcamp! In this folder is everything you need to learn more about HTML, CSS and JavaScript and build your own first mini website.

In this folder are 3 zip files, I'll quickly run you through these so that you know what's inside:

- **Coding Manuals**: These have all the instructions to teach you how to create your site! There is one for each page on the website. The easiest way to read these is in PDF format, but I know that sometimes it's hard to copy code from a PDF to your machine. There are online versions of these documents below, so you can use these to copy and paste code if you run into trouble with that. Just click on the below link to access them:
    - [Login Page](#)
    - [50 States Game](#)
    - [Guessing Game](#)
    - [Math Game](#)
    - [Winner & About Page](#)
- **Project Files**: This contains all the files you need to create your site. This contains images and some HTML and CSS files, and there will be instructions on what to do with these in your manuals.
- **Completed Project:** This contains a copy of the fully working website you are trying to build. If you have any trouble with your code that can't be fixed with the manual, pop in here and compare your HTML, JavaScript or CSS with the corresponding file in here.

That's everything you need to know right now! Open 'StephMyLife Beginners Bootcamp Intro' to get started.

Thanks for joining the Beginners Bootcamp!

Steph
